

CDC 202: Figure Drawing 1

Meets: Thursdays (see start date schedule for specific date)

Time: 1pm - 4pm

Length of Course: 10 weeks

Instructor: Timothy Rees

Course Description: Course Description: Students work from a live model in the methods of the charcoal medium introduced in the first term. The class stresses accurate measuring, simplification, and basic figure drawing. Because simplification of the figure provides the groundwork for a successful drawing, students begin with many quick but accurate sketches before working up to long, delicately rendered figure drawings toward the end of the course. In the first hour of each class students execute anatomical studies of lecture topics from the proceeding week, working in a method of quick charcoal application technique presented early in the second term.
